REBEL Safety Gear work boots and shoes comply with the high standards required by ISO 20345:2011 and SANS 20345:2014. The classification systems used to identify the protection provided by our footwear is listed below:

SB	Impact and compression 200 joules.
S1	Impact and compression 200 joules, closed heel region and anti-static properties.
S1P	Anti-penetration protection plus S1.
S2	As S1, plus water resistance.
S3	As S2, plus penetration resistance.

Added protection can be provided and is identified on the product by it's marking:

- HRO = Sole resistant to hot contact of 300°C for 60 seconds
- P = Penetration resistance: 1100 Newton's
- M = Metatarsal protection
- WR = Water resistance
- SRA = Slip resistance – tested on a ceramic surface
- SRB = Slip resistance – tested on a metal surface
- SRC = Slip resistance – tested on ceramic and metal surfaces

Please refer to the tongue label to identify the specific safety and protection properties built-in to your pair of REBEL boots or shoes. It is important that the specific style and size of boot or shoe selected for use meets requirements for the environment and application in which it will be used.

Where the environment is not known, it is very important that consultation is carried out between the seller and the purchaser to ensure, where possible, the correct footwear is provided.

Electrostatic Discharge (ESD)

Anti-static (S1) shoes only offer a limited ability to allow charge to flow through them. ESD shoes have a sole that is more conductive, and thus offer a greater ability for charge to flow through them.

ESD shoes are the footwear of choice in an environment such as an electrical assembly plant, where a small electrostatic charge from the wearer onto a sensitive circuit board may damage the circuit board. The worker would wear an ESD pair of shoes to ensure that all the static build-up gets dissipated into the ground, and not through any other part of his or her body, such as hands.

REBEL safety footwear has been designed and manufactured to be worn in most industrial areas, although extreme temperatures, environments and conditions will shorten the footwear's lifespan.

It is important to take time to care for your safety footwear. Proper care will add to the lifespan of your footwear, it should ensure that the maximum comfort level is maintained for longer, and that hygienically, your shoes or boots do not contribute to health problems.

Lifespan of safety footwear

There is no set guide for how long your footwear will last. It depends on the environment in which it has been used and stored.

Storing footwear and the risk of Hydrolysis

Most safety footwear (including REBEL) soles are made from polyurethane (PU). PU has the right mix of abrasion resistance, lightweight properties and cost effectiveness. However, PU is a chemical compound which can degrade over time if it is not used regularly, or if it is stored in a dark and/or humid environment without regular use. If your boots have sat unused for a long period of time (approx. three years) and then you start using them again, there is a high risk that the sole may disintegrate, this is known as hydrolysis. We cannot be held responsible for this disintegration if it results from long periods of storage.

Water damage

Most safety footwear is made from leather. Leather is NOT waterproof, or water-resistant, unless it has been specifically treated. If your boots are repeatedly exposed to water and mud, and they are not listed as water-resistant, they will eventually crack. We will view this as improper use, and will not replace any shoes which have become damaged as a result. If you polish your boots regularly, then the polish will protect against occasional – NOT regular water exposure.

Safety footwear care tips

- Avoid scuffing the upper leather or treading on sharp edges that could cut or tear the sole.
- Clean your shoes regularly.
- Remove excess mud and dirt and wipe clean with a damp cloth and allow drying thoroughly, preferably overnight at room temperature.
- Never force dry your shoes or boots if they become wet, as direct heat may distort the upper and cause the leather to crack.
- If your footwear has a leather upper apply a good quality wax polish or shoe cream regularly.
- If your footwear has a Nubuck or suede upper it should be gently rubbed with a stiff bristled brush.
- Soles should be checked regularly and stones and metal shavings removed from the cleats.
- If the laces become worn, replace immediately to ensure a good fit.

It is very important to note that damaged footwear will not provide the necessary protection you require, and should be replaced immediately if not in a suitable condition to protect your feet.
